MIGHTYBEARS™ FAQs

1. What benefits do MightyBears offer?

We were able to develop a new nutritional pectin, multi-benefit gummy containing a fruit and vegetable blend that offers Vitamins A, C, D, and E, Probiotics (Bacillus Coagulans) and Zinc. The MightyBears gummy is great tasting (mixed berry and grape flavored) and in the shape of a bear. Perfect for children and adults. Sweetened with tapioca and cane sugar.

This supplement is unlike anything currently on the market, a supplement that meets needs for all ages and demographics. MightyBears supports:

- eye health.*
- brain health.*
- the immune system.*
- bone health.*
- growth and development.*
- gut health.*

2. How do MightyBears differ from a multivitamin?

MightyBears were formulated to provide specific benefits needed for children 4 and up. The number of vitamins and minerals in each serving are not intended to provide ***more*** than the daily requirements (like most multivitamins). These nutritional gummies are designed to support specific areas of health that may be lacking in one's, specifically children, daily diet.*

3. Why do MightyBears contain sugar?

MightyBears contain a small amount of organic cane sugar to create delicious vitamins that your kids will want to take every day. We're proud to say we use up to 80% less sugar than other common gummy vitamins. Each gummy contains 1.55 grams of sugar (6 grams total), which is the approximate amount of sugar found in 8 grapes.[1]

4. Can more than one serving of MightyBears be consumed daily?

Like all supplements, we can only suggest following the label instructions which is 4 gummies daily.

5. Does MightyBears provide a full serving of Glycans?

MightyBears do contain Glycans and although this is not the equivalent amount that you would find in a serving of the Ambrotose® powders, they still offer antioxidant support along with a wide range of other benefits in a tasty, convenient, yummy gummy.*

6. Why Are MightyBears coated with crystals?

Cane sugar crystals dusted on the gummies keep them from sticking together, allowing them to remain at peak condition during shipping and storage. Through the reformulation process, we took extra steps to decrease the granular size of the crystals which you may find to be an improvement to the texture and taste of the gummy.

7. What fruits and vegetables are included in the Phytonutrient Blend?

The fruit and vegetable blend is made up of raspberry, broccoli sprout, broccoli flower & stalk, carrot root, kale leaf, tomato fruit, and spinach leaf.

8. Why did Mannatech choose Bacillus Coagulans as the probiotic source?

The probiotic strain Bacillus Coagulans is a powerful and strong bacterium that can withstand the acidic environment of the stomach. It is considered spore-forming and is resistant to high temperatures. This strain is also from a vegan source which was important in maintaining a vegan claim.[2]
